Professional Summary

Full-Stack Software Engineer with **10+ months of experience** building scalable web platforms, internal admin tools, and cloud-native REST APIs in production environments. Architected a **React/TypeScript** admin platform managing **100,000+** user records and shipped full-stack features using **React, TypeScript, Node.js, Go**, and **AWS** (Lambda, DynamoDB, S3) across the full development lifecycle from system design to deployment and performance tuning. Comfortable owning features end-to-end: cut a core API's query pattern from N+1 to a single batched call and resolved **40%** of all bug-fix commits on a cross-platform desktop client.

Skills

Languages: JavaScript, TypeScript, C++, Java, Python, SQL

Frontend: HTML5, CSS3, React.js, Tailwind CSS, Vite, React Router

Backend & Data: Node.js, Express.js, MongoDB, REST APIs, JWT, AWS (Lambda, DynamoDB, S3)

Also worked with: Go (Golang – Lambda handlers, internal libraries), Firebase

Tools: Git, GitHub, GitHub Actions (CI/CD), Postman (API Testing), Power Automate

Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Software Engineer I

Dec 2025 – Present

SysAmplify Technologies

Bangalore, India

- Designed a reusable, config-driven **GenericTable/GenericForm** architecture (**React, TypeScript**) off a central schema, letting **5+** dashboard modules plug in with zero new UI code; added an **S3 Browser Modal** with AWS-Console-style breadcrumb navigation and lazy loading.
- Shipped the public marketing site and auth flows (**React, TypeScript, Tailwind CSS**) and a markdown-driven docs platform; led a **CSS architecture** refactor unifying styling across the codebase.
- Built Go/Lambda **REST APIs** (*gorilla/mux, aws-lambda-go-api-proxy*) over **DynamoDB** with cursor-based pagination and multi-field filtering; diagnosed and fixed an **N+1** query bug by replacing a per-record DB call inside a loop with a single batched query.
- Maintained a shared internal **Go database-utilities library** (**6,000+ lines**) for DB access and structured logging, consumed by multiple backend services; independently built its **S3 utilities** module for internal file/asset workflows.
- Owned **57%** of merged pull requests and drove **50%** of total development activity on a cross-platform desktop test-automation tool (Java Swing) over a 4-month release cycle, delivering **5+** core workflows end-to-end and refactoring the UI into a reusable component/theming library with full dark-mode support.
- Resolved **40%** of all bug-fix commits merged into the desktop test-automation tool's codebase, spanning **100+** tracked defects, including critical data-loss and session-management fixes; verified through manual regression testing across affected workflows.

Software Developer

Sep 2025 – Nov 2025

Freelance

Remote

- Engineered a real-time inventory dashboard in **React** that polls client-supplied stock-data files on an interval to visualize live stock for a **500+ SKU** catalog, eliminating manual stock checks; reduced processing time by **30%** and saved **5+ hours/week** (client-reported).

Associate AI Product Development Intern

Jan 2024 – Apr 2024

Neodocto Inc

Remote

- Automated product listing workflows using **Power Automate**, saving **10 hours/week** of manual data entry.
- Mentored **10+** interns across a cross-functional team.

Projects

AI Job Tracker | *React.js, Node.js, MongoDB, Gemini API, JWT*

2026

- Integrated the **Gemini API** for AI-based job description analysis and interview prep, with a drag-and-drop Kanban board and a **real-time analytics** dashboard, secured via JWT authentication.

Book Store | *React.js, Node.js, MongoDB, Firebase, JWT*

2025

- Modeled MongoDB schemas and aggregation pipelines (**\$group, \$sum, date-bucketing**) to compute sales and order KPIs for a **100+** item catalog, exposed via a role-gated (**JWT**) API layer powering an admin analytics view.

Education

Heritage Institute of Technology

Kolkata, India

Bachelor of Technology (B.Tech) in Computer Science and Engineering, CGPA: 7.88/10

Oct 2021 – Jul 2025

Achievements

- Solved **500+** problems on **LeetCode** (**1600+ rating**) and GeeksforGeeks, covering core data structures and algorithms.
- Semifinalist, **Flipkart GRID 5.0** and **Tata Imagination Challenge**.
- Advanced to Phase 2, **Myntra Hacker-Ramp WeForShe 2024** (via Unstop).
